CONTATO AUXILIAR BC2

TR 5927

This was created to solve the lack of electrical efficiency of the material. Developed in a 12% AgCdo alloy, the contact shows a significant improvement in the electrical efficiency.

GABINETE DO CAPTOR DO CDV

TR 5939

Utilização - parte do sistema de via/sinalização

After creating an original lodgement and rings for the cabinet, it was possible to solve the problem reported by the customer.

By eliminating humidity, the false positioning of cars on the track is no longer a complication to the proper functioning of the signaling system.

THIRD RAIL PICKUP SHOE HOLDER

TR 5906

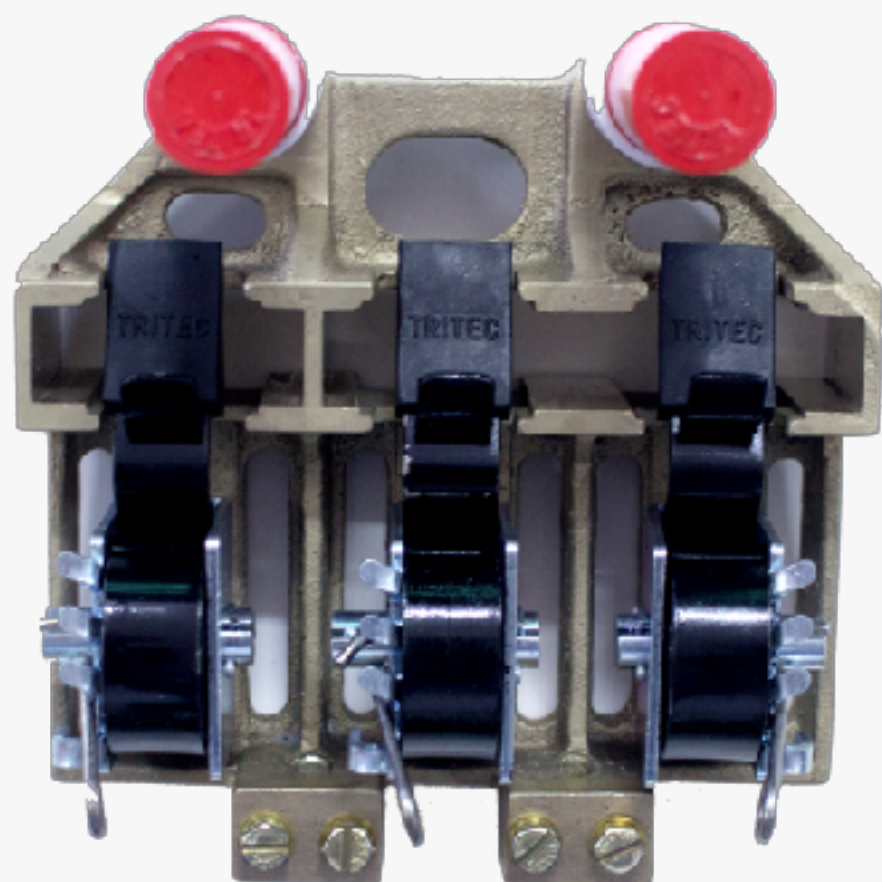

Utilização - sistema de alimentação elétrica

Due to the high breakage number of this part, we were asked to find a solution.

In order to solve this problem, we changed the composition of the materials increasing the mechanical resistance of the part.
